

## The new PicoScope NVH Diagnostics Kit for Noise, Vibration and Harshness testing

*Click images to download hi-res versions*

The PicoScope NVH Diagnostics Kit provides a breakthrough in accurate analysis of vehicle noise, vibration and harshness problems. Using the large display of your existing laptop, this system combines lightning-fast capture and analysis of vehicle data with clear, easy-to-read presentation of results and actions.

Pico Technology continues to add capability to its industry-leading PicoScope diagnostic oscilloscopes in order to equip technicians worldwide with the tools to tackle troublesome problems. Vehicle noise, vibration and harshness (NVH) are significant reasons for customer dissatisfaction, but quickly identifying the cause of a vibration and finding its location can be a difficult task, even for the most experienced technician.

Now, there's an easier method for NVH diagnosis. The PicoScope Diagnostic Kit with NVH provides a more accurate analysis of vehicle noise, vibration and harshness conditions. Results can be displayed in a variety of numerical and graphical formats, all of which can easily be emailed, saved or printed direct from your laptop.

The NVH kit works with PicoScope<sup>®</sup> – the world's most popular automotive oscilloscope. This has been engineered to improve efficiency within the workshop by allowing you to directly check sensors, actuators, systems and wiring. With special functions to help in capturing and diagnosing intermittent and performance problems, PicoScope allows you to do much more than just test wiring, components, noise and vibrations.

This kit is available to all users of PicoScope 4000 Series Automotive scopes. You can resolve some of your customers' most demanding and elusive complaints using NVH analysis and the many other tools available with PicoScope. Optional accessories support balancing of propshafts and other rotating components.
